

Obserra EIOS — Install & User Guide

Executive Protection & Intelligence LLC

A continuous AI control plane for enterprise cyber risk, AI governance and board-ready executive intelligence. This guide covers installation (cloud, mobile and on-premise) and a full walkthrough of every dashboard.

1. About Obserra

Obserra presents one evidence-grounded platform at two altitudes: an Executive view (financial exposure, risk reduction, decisions required) and an Operational view (AI usage, patching, incidents and remediation). Every metric carries its source, freshness and confidence.

The platform is delivered as an installable Progressive Web App (PWA) and can also be self-hosted on-premise with Docker.

2. Installing the App (One-Click PWA)

Obserra installs like a native app straight from the browser — no app store required. It works across desktop, tablet and mobile.

Desktop (Chrome / Edge): open the site and click the Install icon in the address bar, or use the in-app 'Install Obserra' banner.

Android (Chrome): tap the 'Install Obserra' banner, or use menu -> Add to Home screen.

iPhone / iPad (Safari): tap Share -> Add to Home Screen.

Once installed, Obserra launches full-screen and can receive push notifications.

3. On-Premise Installation (Docker)

For fully self-hosted deployments, download the on-premise package from Settings -> Deployment & Documentation. No install script is required; an optional install.sh is included for convenience.

Prerequisites: Docker 24+ and Docker Compose v2, 2 vCPU / 4 GB RAM (8 GB recommended).

Steps: (1) place the backend/ and frontend/ source next to the deploy/ folder; (2) copy .env.example to .env and set JWT_SECRET, EMERGENT_LLM_KEY and PUBLIC_URL; (3) run: `docker compose -f deploy/docker-compose.yml --env-file deploy/.env up -d --build`; (4) open `http://:8080`.

MongoDB data persists in a Docker volume across restarts. For production, terminate TLS with a reverse proxy in front of port 8080. Full details are in the bundled INSTALL.md.

4. Signing In

Open the app and sign in with your work email and password. Enterprise SSO, Apple and Google sign-in, and passwordless QR login are also available. Passwords follow NIST 800-63B (>=12 chars with upper/lower/number/symbol).

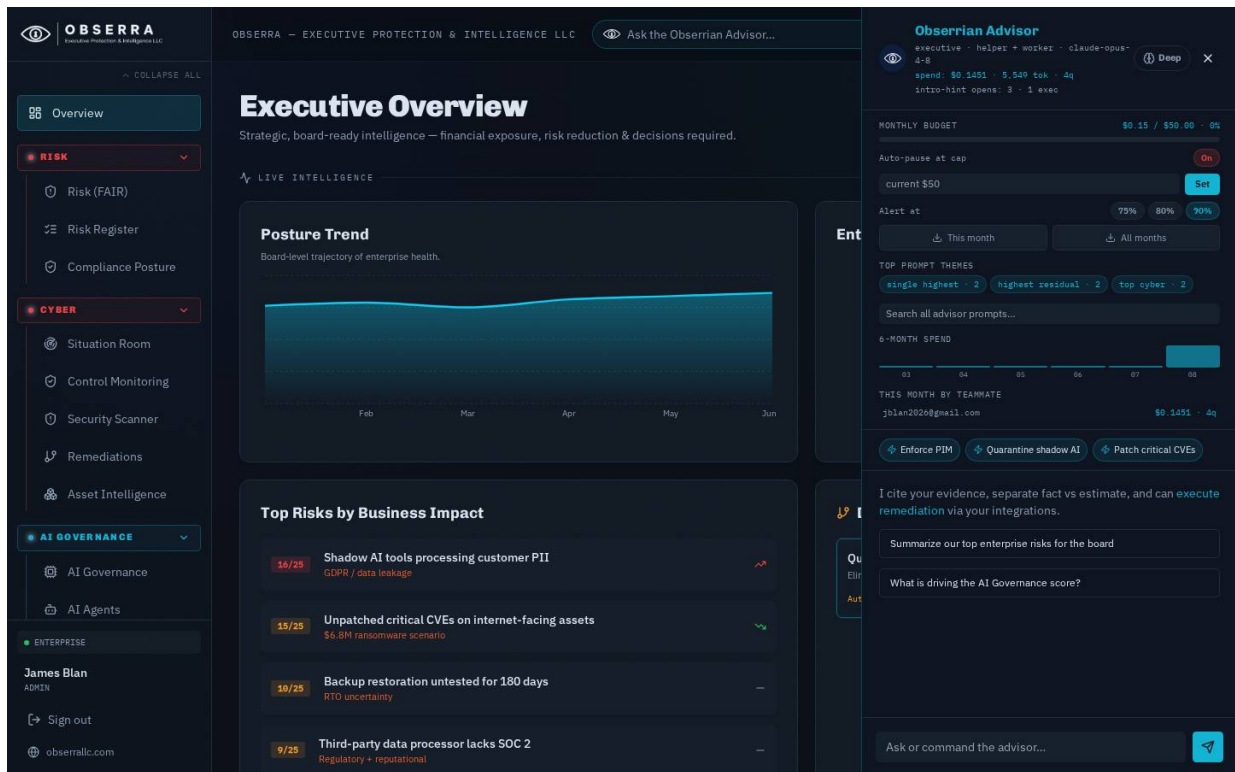

Figure: 4. Signing In

5. Executive Overview

The Executive view opens on strategic, board-ready intelligence: the Posture Trend, the Enterprise Health Index, Top Risks by Business Impact and Decisions Required. Use 'Generate Board Report' to produce a branded PDF at any time.

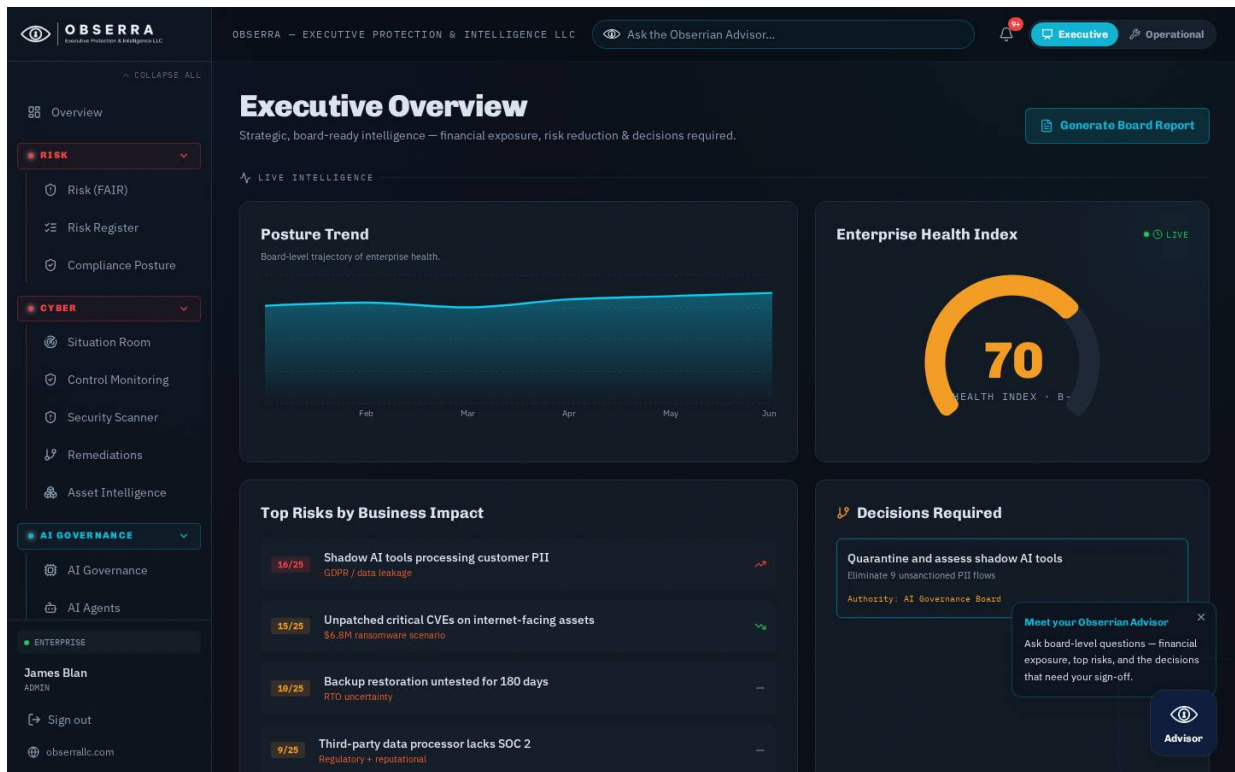

Figure: 5. Executive Overview

6. Operational Command

Toggle to Operational mode (top-right) for the working view: NIST control maturity, third-party vendor risk, phishing click-rate, patching coverage, the risk heatmap and remediation workflows.

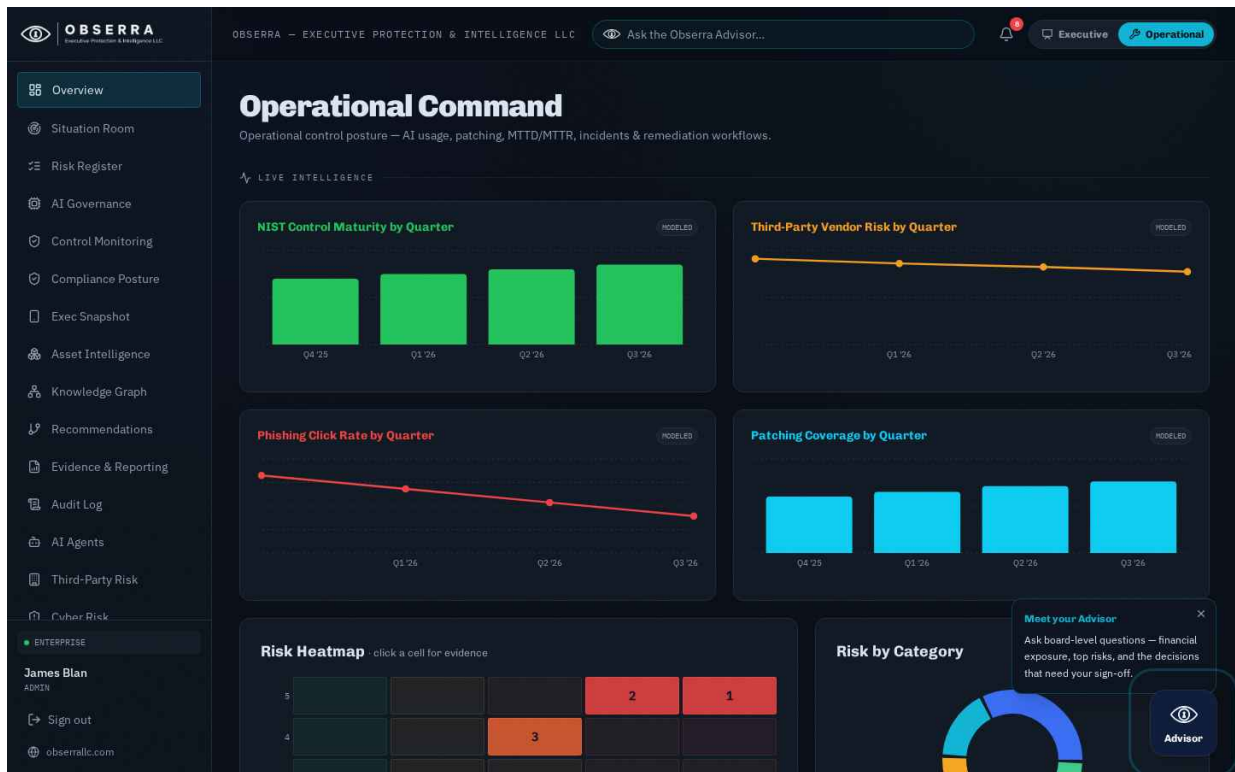

Figure: 6. Operational Command

7. Risk Register

The Risk Register lists every tracked risk with inherent vs residual scoring, financial exposure (FAIR-style annualized loss expectancy) and evidence links for board defensibility.

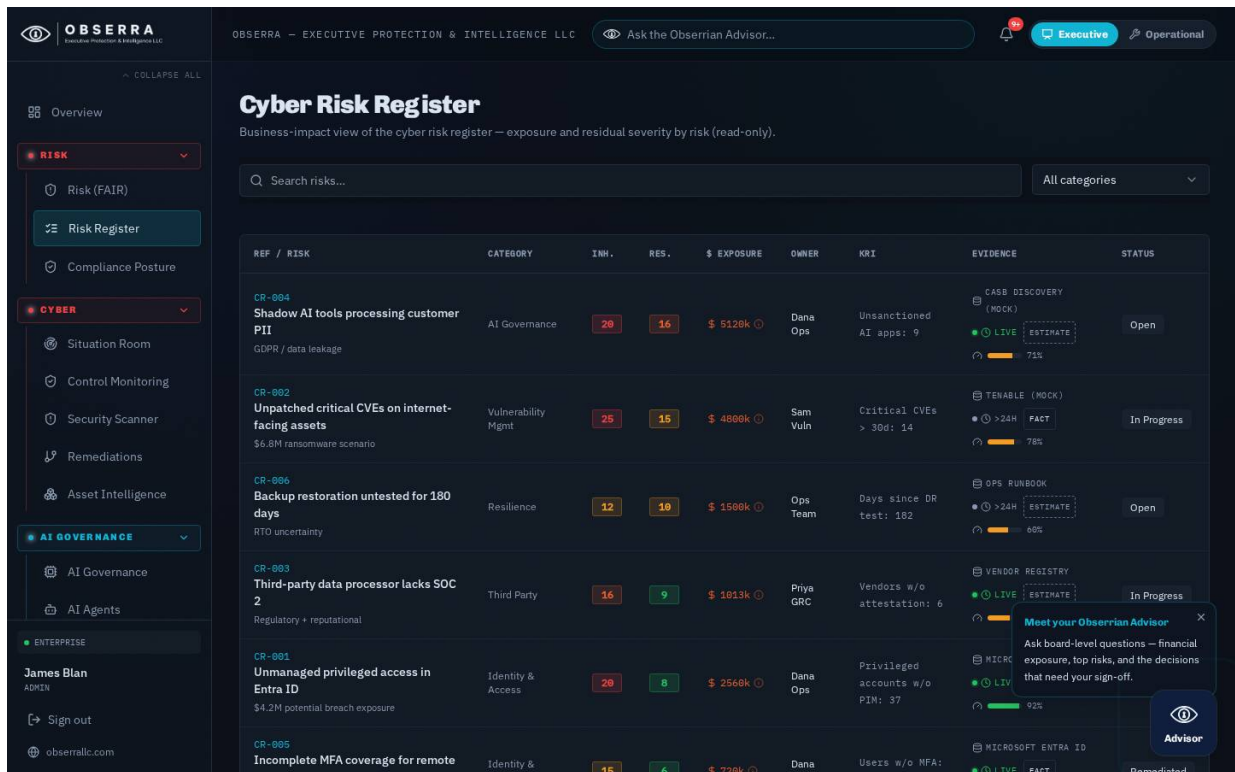

Figure: 7. Risk Register

7b. Risk (FAIR) Quantification

The Risk workspace quantifies exposure using Factor Analysis of Information Risk (FAIR). It surfaces board KPIs — \$ at Risk (residual ALE), worst-case P90, remediation ROI and accepted (unremediated) exposure — plus a per-area exposure breakdown showing the dominant driver of each risk (loss magnitude, threat frequency or control weakness), a loss-exceedance curve, and plain-English FAIR-based deductions. Auto-updating IBM/DBIR benchmark feeds carry last-pull timestamps and sources, and a 'Why these KPIs' panel cites Gartner, NACD, the FAIR Institute and the WEF so every board metric is defensible.

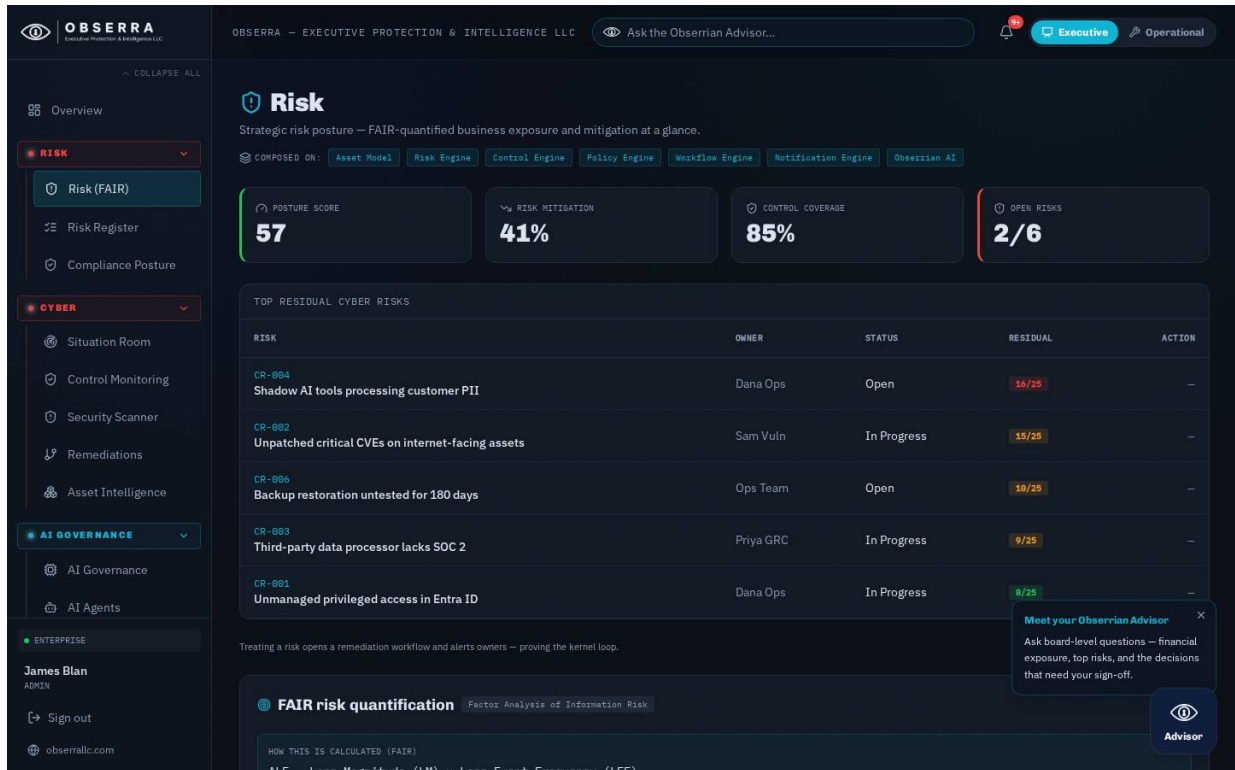

Figure: 7b. Risk (FAIR) Quantification

8. AI Governance Suite

Inventory of AI systems with NIST AI RMF mapping, model cards (bias, safety, security, explainability), drift and hallucination indicators, shadow-AI discovery and incident management. Bring shadow tools under governance in one click.

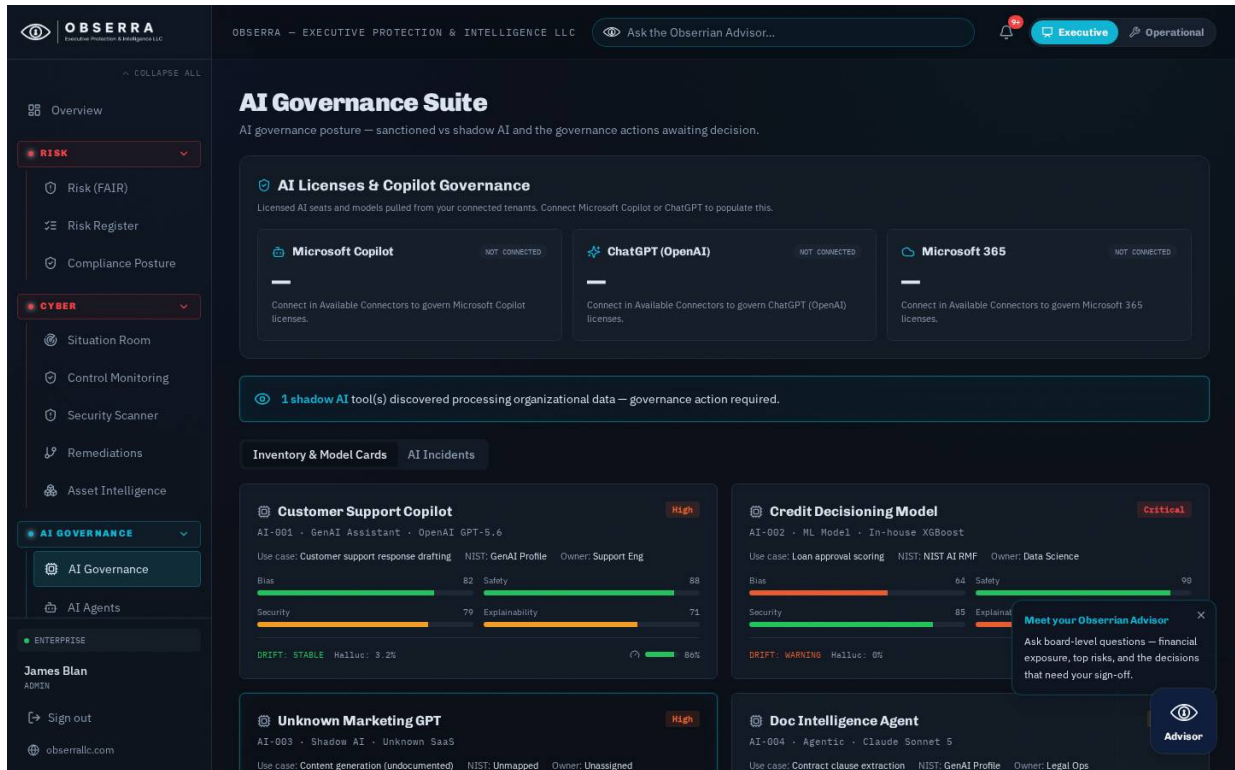

Figure: 8. AI Governance Suite

9. Control Monitoring

Continuously monitor control health and drift. Open alerts can be summarized to you on a daily or weekly digest cadence (configurable in Settings).

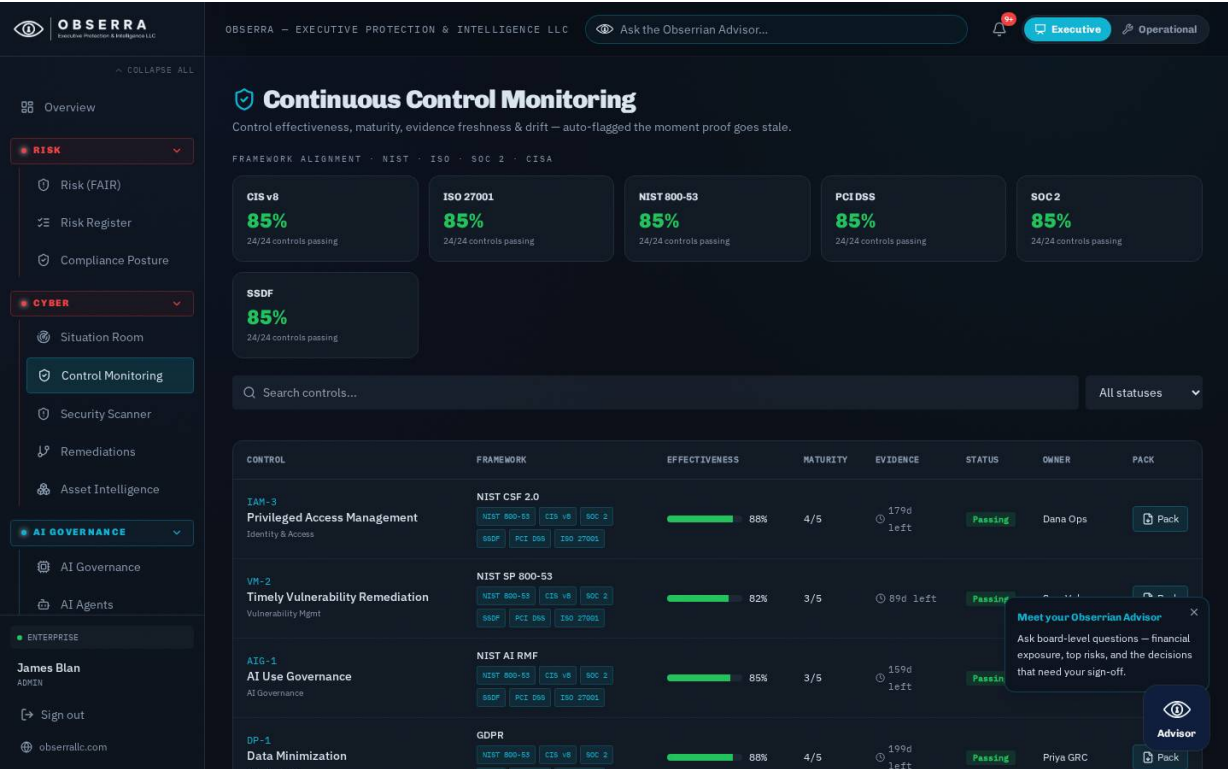

Figure: 9. Control Monitoring

10. Compliance Posture

Track compliance posture across frameworks with evidence freshness so every figure stays audit-ready.

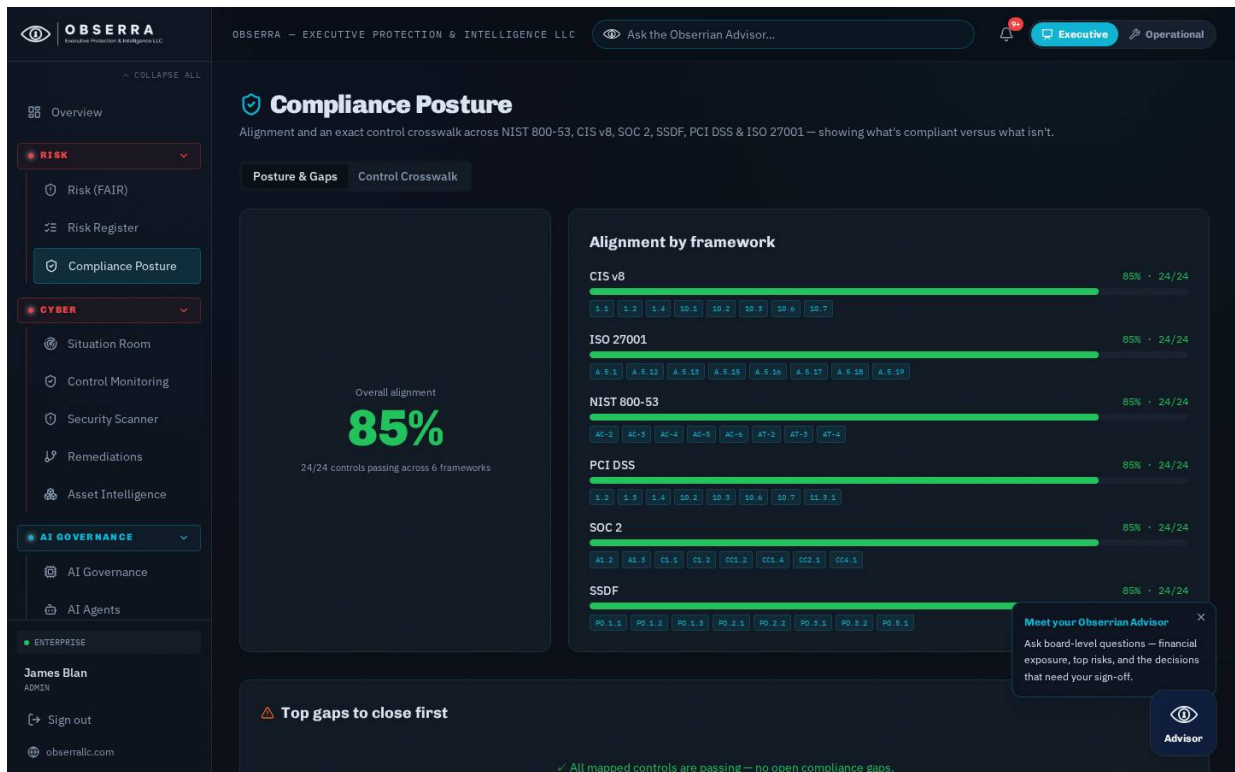

Figure: 10. Compliance Posture

11. Evidence & Reporting

Generate board-ready packets tied to evidence. 'New Board Report' synthesizes a report and shows a live branded cover preview. Export as a vertical PDF or a landscape Quarterly Deck, toggle a light/dark cover theme, email it, or share to Microsoft Teams. A monthly job also emails the branded PDF to chosen recipients automatically.

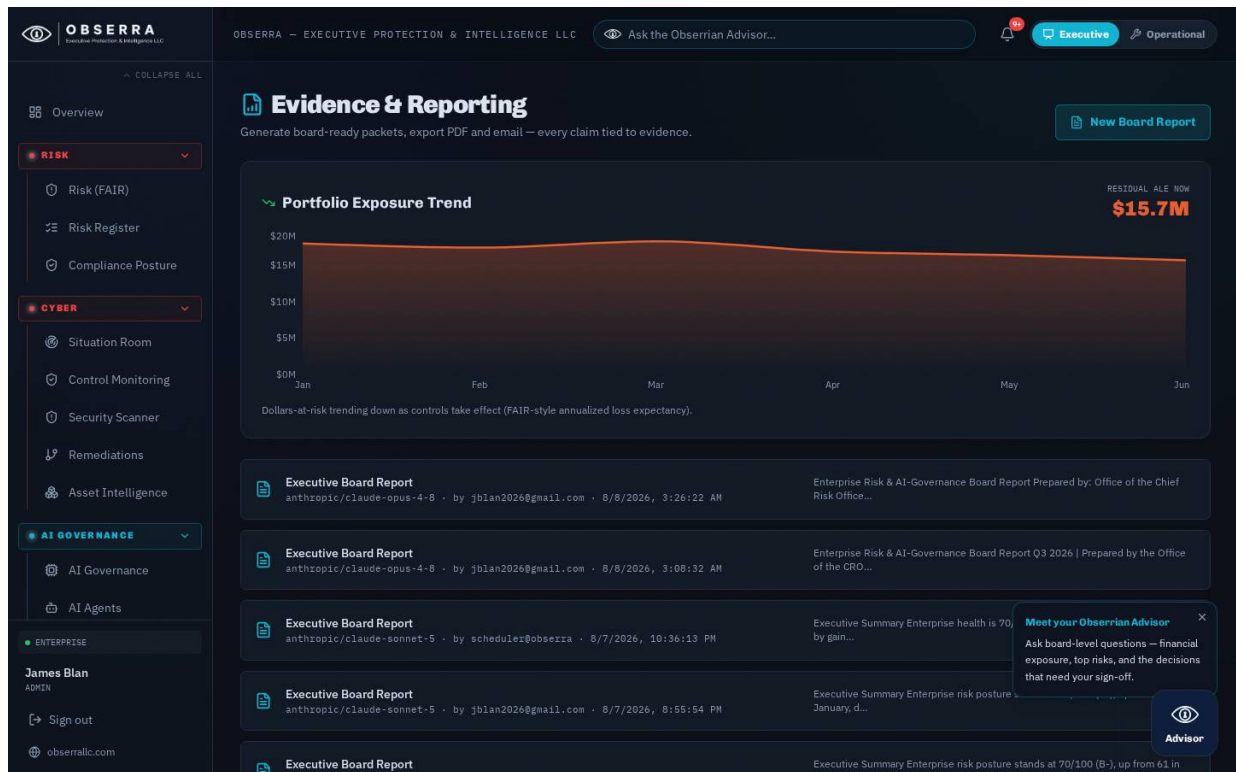

Figure: 11. Evidence & Reporting

12. Settings, Branding & Deployment

Personal preferences (digest cadence, replay the guided tour) plus admin controls: board-report recipients, custom report branding (company name, logo, accent colour) with a live cover preview, a 'Send me a test now' button, and the Deployment & Documentation downloads (on-premise package, this guide in PDF and Word).

13. Obserra Advisor

The floating Advisor (bottom-right) answers board-level questions grounded on your live posture — financial exposure, top risks and the decisions that need sign-off. It can also execute recommended actions and, for admins, reports its own usage and spend.

14. Support

For assistance contact your Obserra administrator. Risk scores and AI evaluations are decision-support estimates and do not constitute legal, financial, regulatory or security guarantees.
